

Finreon Tail Risk Control® (Swiss)

30/06/2022

Strategy

The Finreon Tail Risk Indicator (TRI) measures the probability of large tail events (crashes) on equity markets systematically and on a daily basis by means of various market factors. Accordingly, the fund's equity quota is set between 0% (high measured risks) and 100% (low measured risks), depending on the prevailing market regime as indicated by the TRI.

The equity share is held via a portfolio which tracks the performance of the SPI 20 TR. The cash portion is invested in a portfolio of money market instruments. The strategy is suitable for investors who intend to participate in the risk-controlled performance of the Swiss equity market while avoiding large drawdowns. Total risk born by the investor is similar to a benchmark consisting of 50% equity and 50% SARON ("Benchmark 50/50").

Current month

Comment

During June, the Finreon Tail Risk Indicator ranged between normal and high crash risks and at the end of the month, the tail risk signal is light red (increased crash-risk). The Finreon Tail Risk Control® strategy is therefore 25% invested in Swiss equities.

The Finreon Tail Risk Control® (Swiss) strategy achieved a return of -2.4% in June and thereby outperformed the benchmark, which achieved -3.6%.

	Tail Risk Control (Swiss) ¹	Benchmark (50/50)
Return current month	-2.4%	-3.6%
Return year-to-date	-10.6%	-7.3%

Finreon Tail Risk Control® concept

- **Tail Risk Indicator:** The probability of severe tail events (crashes) is measured by means of various market factors on a daily basis and is illustrated by a risk signal light
- **Risk signal:** The Finreon Tail Risk Control® strategy differentiates between five risk regimes and accordingly controls the equity quota: Ranging from green (low probability of tail events = 100% equities) to red (high probability of tail events = 0% equities)
- **Efficient implementation:** Risk-controlled equity exposure of 0-100% in a portfolio of SPI 20 single stocks (passive) resp. in money market instruments
- **Benchmark:** The benchmark is 50% SPI 20 TR Index / 50% CHF SARON - the strategy has an average equity exposure of 50% and therefore a long-term volatility which corresponds to a 50% equity investment ("Benchmark 50/50")
- **Drawdowns:** Larger drawdowns should be avoided. Risk regimes can mostly be recognized

Development of the Finreon Tail Risk Indicator

The Finreon Tail Risk Control® strategy recognizes risk regimes on a consistent basis. During both the burst of the internet bubble in 2001 and the financial crisis the Finreon Tail Risk Indicator indicated a high tail risk. An investment according to the Finreon Tail Risk Control® strategy experienced substantially less severe drawdowns.
